# IA pioneer ™

Description and Overview

Developed through the SBIR program, under the guidance of PMA-281, **IApioneer** is a streamlined geospatial intelligence software application that puts the most common GEOINT capabilities at your fingertips. Using IApioneer, you can quickly ingest, analyze, and combine aerial and satellite imagery via an easy-to-use interface. Simply load your data and you have full access to a broad array of GEOINT processing tools, including precision geopositioning with the CGS Program libraries – *the* DoD standard for precision targeting, geopositioning services, and photogrammetric applications.

Ingesting imagery and vector info from government and commercial satellite and aerial sources has never been easier. IApioneer accurately displays imagery, annotates, analyses, and lets you extract the information you need in minutes. The data can be used to generate maps, coordinate missions, perform precision targeting, and build GEOINT reports. IApioneer was designed to streamline your GEOINT production workflow and reduce costs through simple design, intuitive interfaces, and elimination of multiple specialty or stovepipe software applications.

IApioneer Features

- Quickly exploit archived aerial and satellite imagery
- Rapidly annotate images
- Easily export products to multiple formats for reporting support
- Quickly load, save, and export data
- Mensuration tools at your fingertips
- Integration with CGS libraries for precision point positioning
- No licensing fees for Federal Government users*

With its seamless integration and dedicated focus on a streamlined workflow, IApioneer will be the tool you turn to for imagery exploitation and analysis.

*Developed under the DoD SBIR program, IApioneer is available without licensing cost to federal agencies. Contact us for more information.
